CZSU Multi-Agent Text-to-SQL Implementation
1. High-Level System Architecture
Overview of System Layers and Services
Technology Stack and Rationale
Data Flow and Architectural Decisions
System Diagram Components
2. Backend Implementation
Backend Architecture and Technologies
Agent Workflow and Orchestration
API Design and Endpoint Structure
Data Management and Persistence
External Service Integration
Error Handling, Authentication, Middleware
Performance Optimizations
3. Frontend Implementation
Frontend Architecture and Technologies
Main Pages and Features
State Management and Component Architecture
API Integration
Authentication Flow
Advanced Features
4. Deployment Implementation
Deployment Strategies and Platforms
Build and Runtime Configuration
Database and External Service Setup
Monitoring and Debugging
Performance Optimization
Cross-Cutting Concerns
Security & Authentication
Observability & Quality
Performance & Scalability
Reliability & Resilience
Data Quality & Compliance
